Education

Mody University of Science and Technology

B.Tech CSE (AI & DL) (CGPA: 8.39)

Sikar, Rajasthan

Aug 2023 - Present

Maharishi Arvind Public School

Senior Secondary School (Percentage: 90%)

Kota, Rajasthan

2022

Internship Experience

DecodeLabs

Backend Development Intern

Remote

Jul 2026 – Present

- Currently building a stateless RESTful API with Node.js (Express.js), implementing GET/POST routes and structured JSON data handling

IBM

AI/ML Virtual Intern

Remote

Jun 2025 – Jul 2025

- Built and deployed an AutoAI model on IBM Watson Studio achieving 85% accuracy in heart disease risk prediction using 13 clinical features; served via REST API on IBM Cloud
- Automated end-to-end ML pipeline including data preprocessing, feature engineering, and model selection, reducing manual experimentation time
- Communicated model performance and clinical outcomes to IBM mentors via structured presentations

Projects

College Discovery Platform | Next.js, TypeScript, PostgreSQL, Prisma, JWT

Jun 2026 – Present

- Developed and deployed 8 RESTful APIs including college search, filter, pagination, and comparison endpoints with proper error handling and input validation
- Implemented secure JWT based authentication with bcrypt password hashing, protected routes, and user-scoped data management for saved colleges
- Designed normalized PostgreSQL schema using Prisma ORM and implemented a rank-based college predictor algorithm supporting JEE cutoff data across multiple reservation categories

HealthGuard AI | FastAPI, React.js, BioBERT

Jan 2026 – Apr 2026

- Fine-tuned BioBERT on 770+ disease classes achieving 81.64% accuracy for real-time symptom-based prediction via FastAPI
- Built full-stack AI medical assistant using React.js, FastAPI, and Vite; integrated FAISS + SentenceTransformers for RAG based semantic retrieval
- Automated prescription parsing using EasyOCR and built a rule-based lab analyzer to flag abnormal blood values
- Deployed local LLM (Ollama, phi3:mini) with modular orchestration for privacy-preserving inference with zero external API dependency

Face Recognition Attendance System | Python, OpenCV, DeepFace

Mar 2025 – May 2025

- Developed a real-time face recognition attendance system using DeepFace and OpenCV achieving 80%+ identification accuracy
- Designed SQLite database with duplicate prevention constraints and Facenet-based facial embedding pipeline supporting incremental student registration
- Automated daily CSV report generation with present/absent status, eliminating manual attendance tracking

Technical Skills

Languages: Java, Python, HTML, CSS, TypeScript

Frameworks & Libraries: Next.js, Express.js, FastAPI, Node.js, React.js, Prisma ORM, OpenCV

Developer Tools: Git, VS Code, IntelliJ IDEA, Postman, Vercel, JWT, REST APIs

Databases: MySQL, Oracle, PostgreSQL, SQLite

Extracurricular Activities

Executive Member, Penumbra Public Speaking Club

Volunteer, Droid Technical Fest - assisted with event coordination and on-ground logistics
